TMFoodStuff dashboard: staff guide

How to add and change products, run promotions and change where we deliver. Every picture in this guide comes from a practice copy of the dashboard with sample data. Your real dashboard shows your real products.

Open the dashboard at your site address followed by `/dashboard`. Prices are in AED.

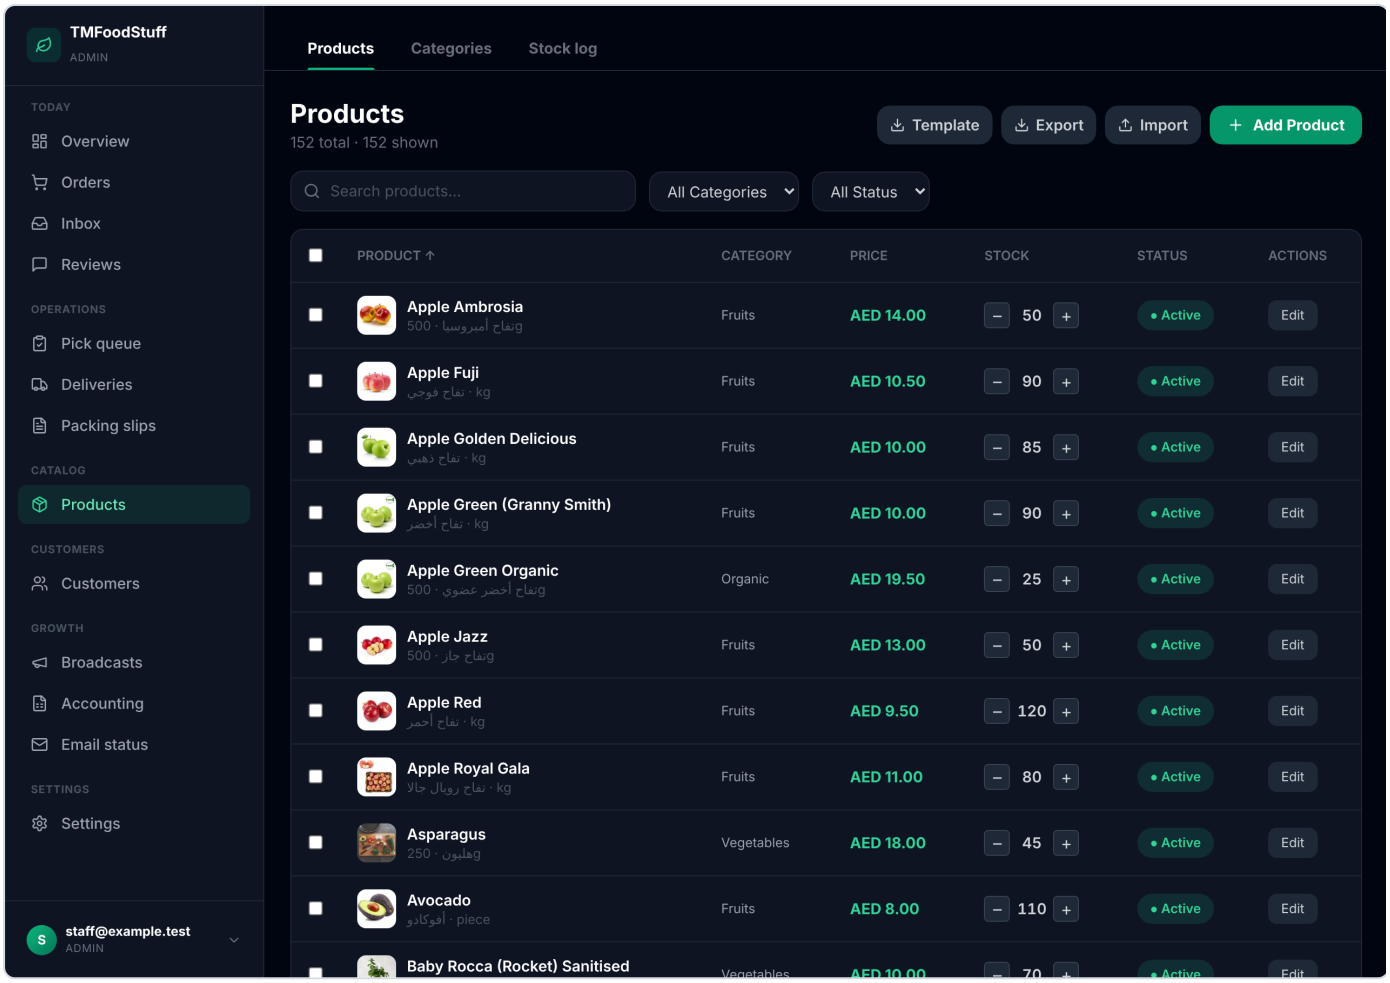

1. Sign in

1. Go to `/dashboard` on the store website. You land on the sign-in page.
2. Type your email and password, then press the sign-in button.
3. If you see "Access denied", your email has not been added to the staff list yet. Ask an administrator to add it.

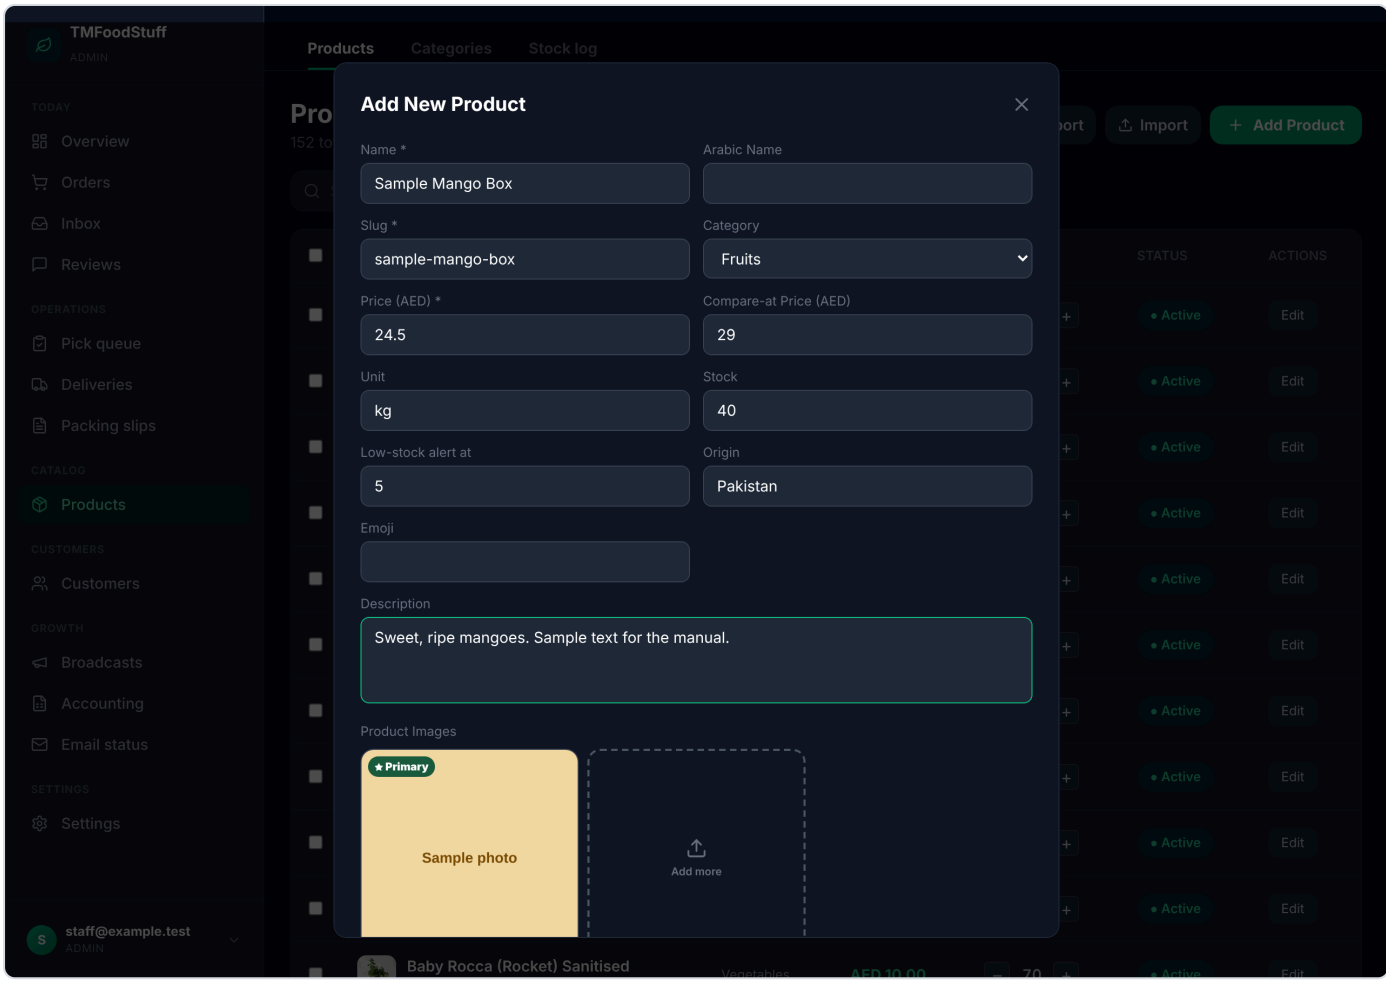

2. Find your way around

The menu on the left has Products, Orders, Customers and, for administrators, Settings. Open **Products** to see every item in the shop. At the top of the list you can search by name, filter by category, or filter by Active and Inactive.

3. Add a product

1. Open **Products** and press the green **Add Product** button at the top right.
2. Fill in the form:
    - **Name** is required. The Slug (the web address of the product) fills in by itself from the name.
    - **Category**: pick one from the list. Add new categories first (section 8).
    - **Price (AED)** is required. This is the price a customer pays for one unit.
    - **Compare-at Price (AED)**: the old, higher price. If you fill it in, the old price shows crossed out beside the new one. Leave it empty for no offer.
    - **Unit** says how the product is sold. Type just the unit: `kg` for goods sold by weight, or `piece`, `box` or `bunch` for items sold by count. The shop adds the word "per" itself, so customers see "per kg".
    - **Stock**: how many units you have right now.
    - **Low-stock alert at**: you are warned when stock falls to this number.
    - **Origin**: where the product comes from.
    - **Description**: a few plain sentences for the customer.
3. Add photos (section 4).
4. Press **Add Product** at the bottom of the form. A green "Product created" message appears.

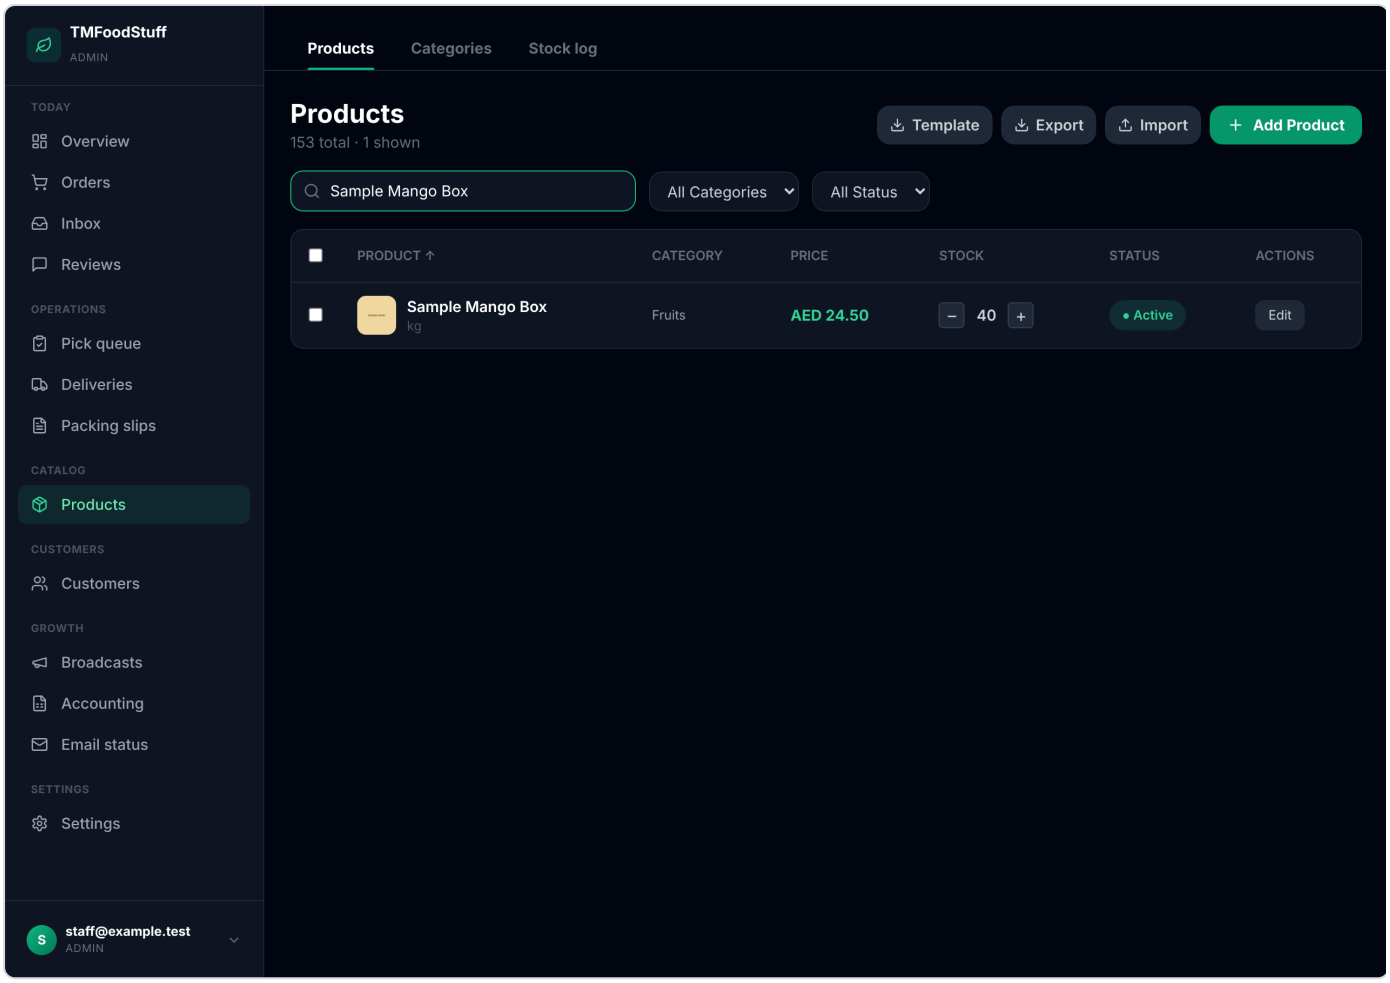

New products are Active, so customers can see them straight away.

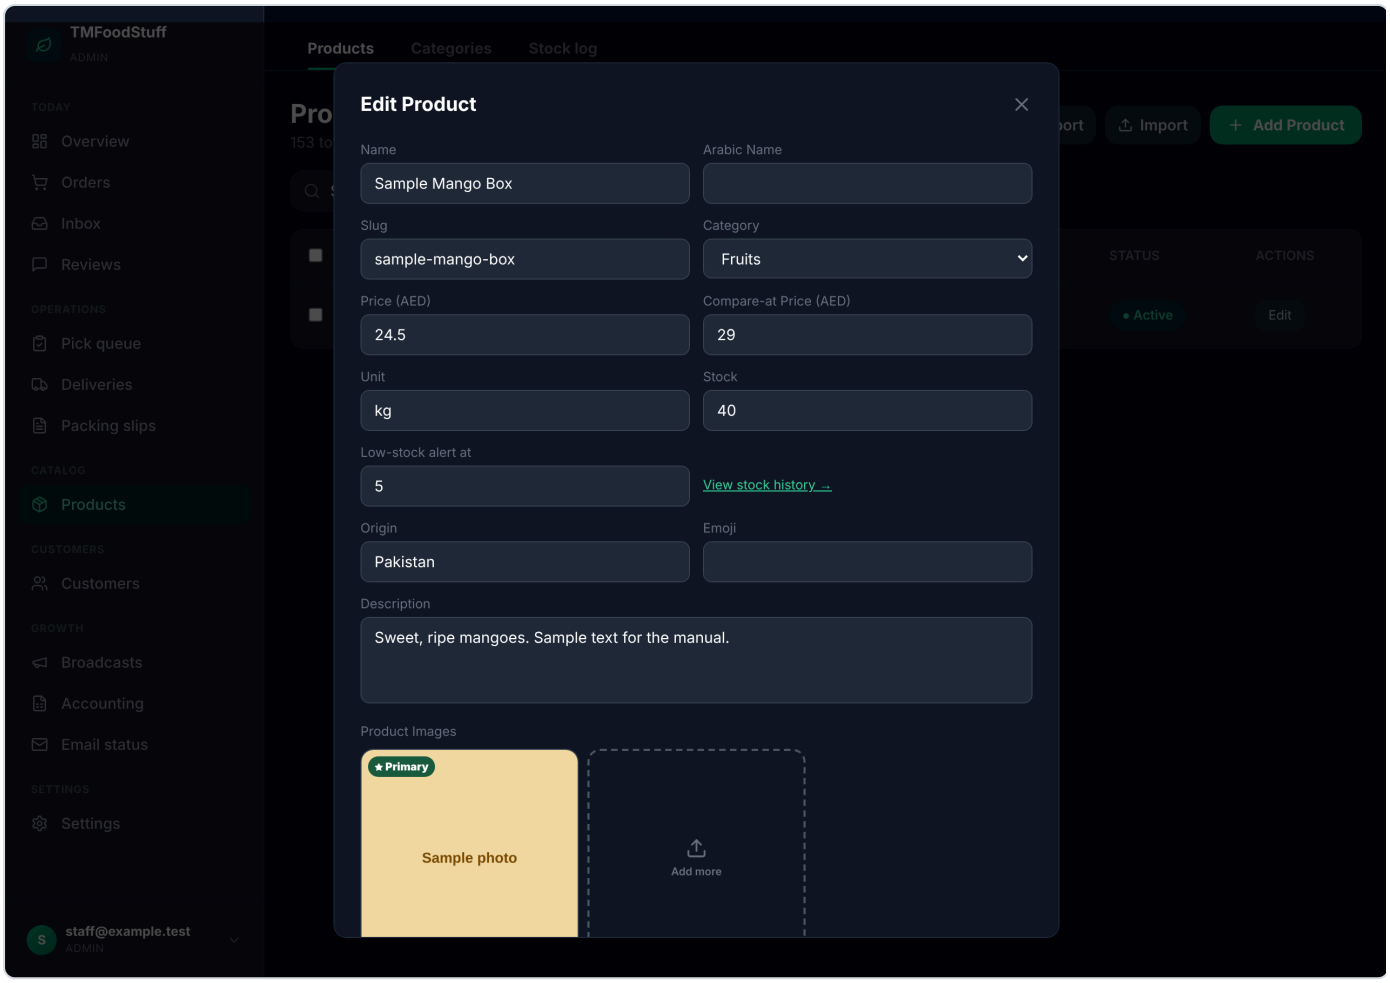

4. Add or change photos

1. In the form, under **Product Images**, press **Add more**.
2. Choose a picture from your phone or computer. JPG, PNG, WebP and AVIF pictures work, up to 5 MB each. You can add up to 6.
3. The first picture is the main one, marked **Primary**. To make another picture the main one, press **Set Primary** on it. To remove a picture, press the small red cross on it.
4. Press **Save Changes** (when editing) or **Add Product** (when adding).

5. Change a price, stock or photo later

1. Open **Products** and type the product name in the search box.
2. Press **Edit** at the end of the row.
3. Change what you need and press the save button at the bottom of the form.

A quick way to change stock: in the products list, press the **minus** or **plus** buttons beside the stock number. Each press changes it by one.

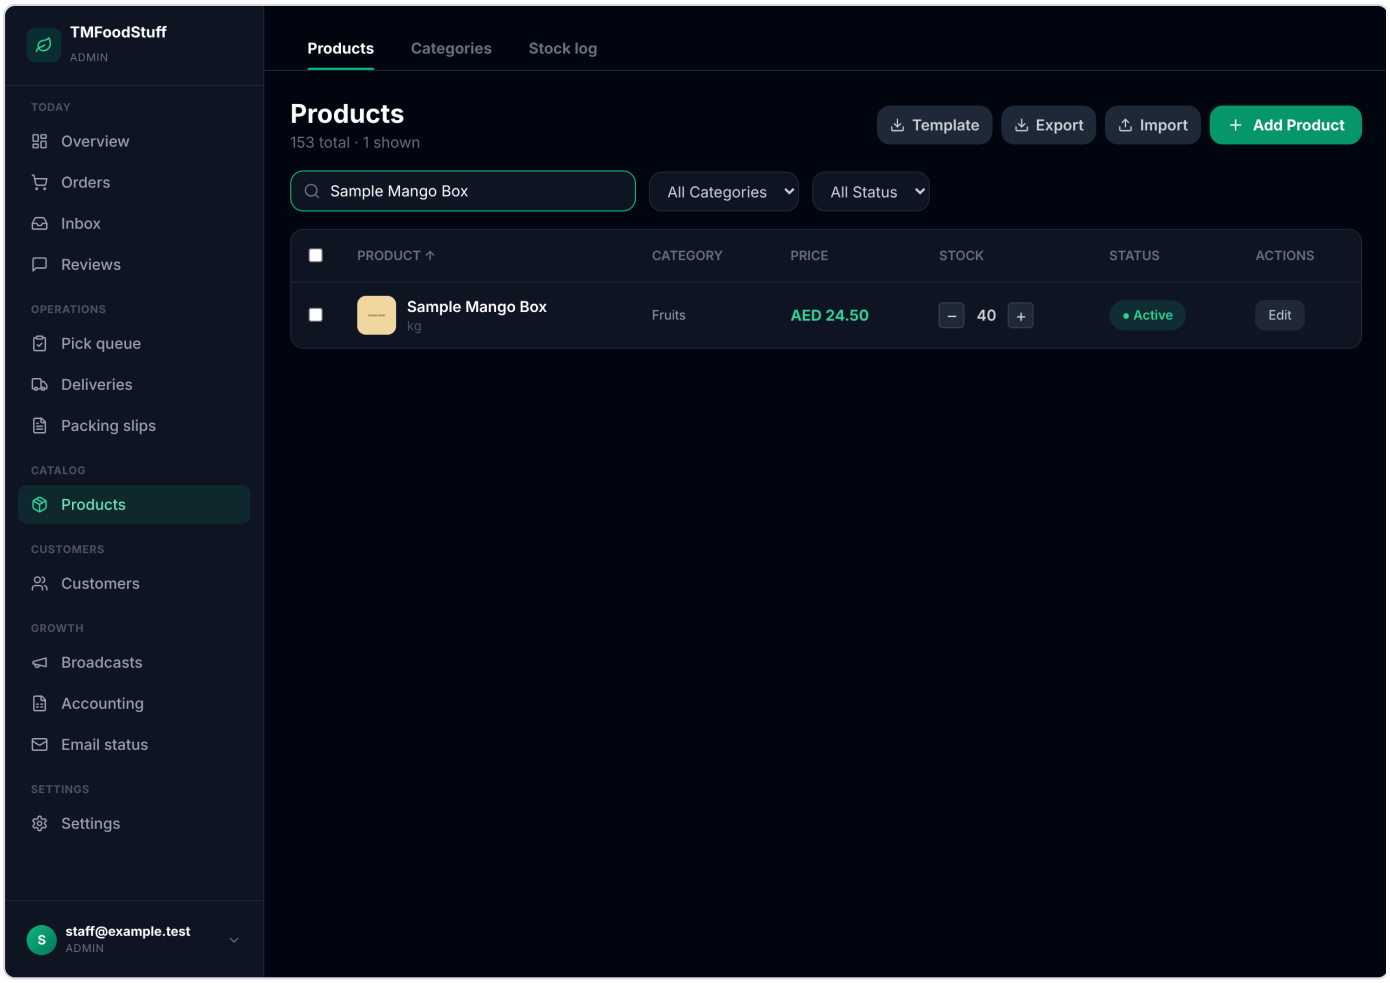

6. Show or hide a product

Each row has a status button: **Active** (customers can see and buy it) or **Inactive** (hidden from customers, nothing is deleted).

1. Find the product in the list.
2. Press the status button once to switch between Active and Inactive.

You can also open **Edit**, scroll down and use the **Active** switch.

To change many products at once, tick the boxes on the left of their rows. Buttons appear above the list: **Activate**, **Deactivate**, **Feature**, **Unfeature** and **Delete**. Delete removes a product for good, so use Deactivate if you only want it hidden.

7. Promotions and promo codes

Promo codes and delivery areas live in **Settings**, which only administrator accounts can see. If you do not see Settings in your menu, ask an administrator to make the change or to give your account administrator access.

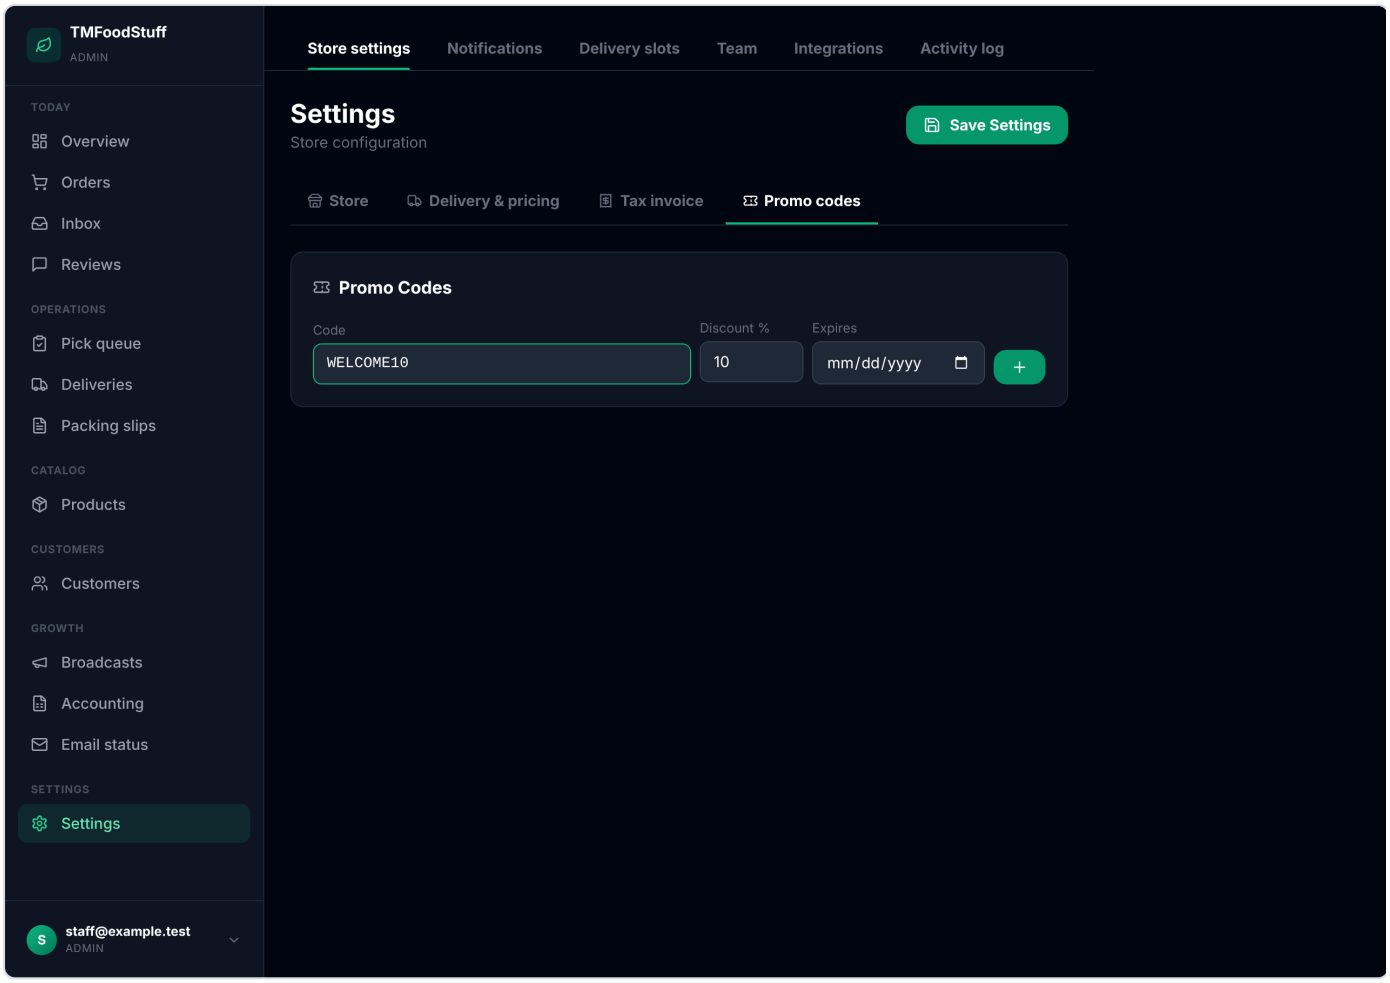

There are two ways to run a promotion.

A sale price on one product. Open the product with **Edit**, put the normal price in **Compare-at Price (AED)** and the lower sale price in **Price (AED)**, then save. To end the sale, clear the Compare-at Price and put the normal price back.

A promo code for a percentage off.

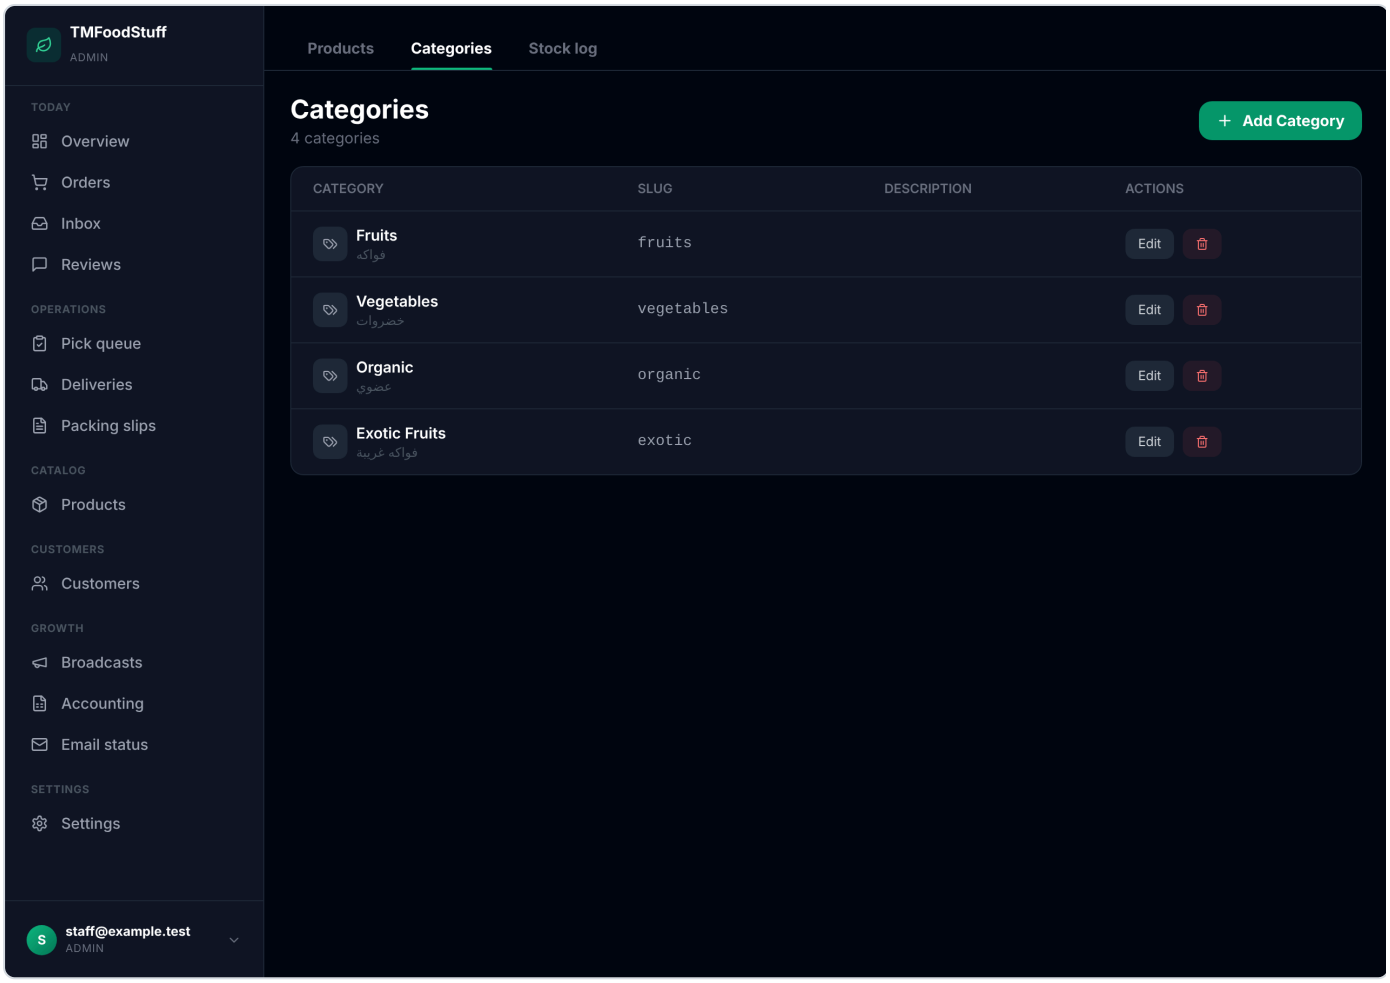

1. Open **Settings** in the left menu, then the **Promo codes** tab.
2. Under **Code**, type the code in capital letters, for example `WELCOME10`.
3. Under **Discount %**, type the percentage, for example `10`.
4. Under **Expires**, pick an end date, or leave it empty for no end date.
5. Press the green **+** button. The code appears in the list above.
6. Press **Save Settings** at the top right. The code does not work until you save.

To stop a code, press **Disable** beside it in the list, then press **Save Settings**.

8. Categories

Open **Categories** from the tabs above the products list. Press **Add Category** to make a new one. Press **Edit** on a row to rename it, or the red bin to remove it. Removing a category does not delete its products, but they become uncategorized, so move them to another category first.

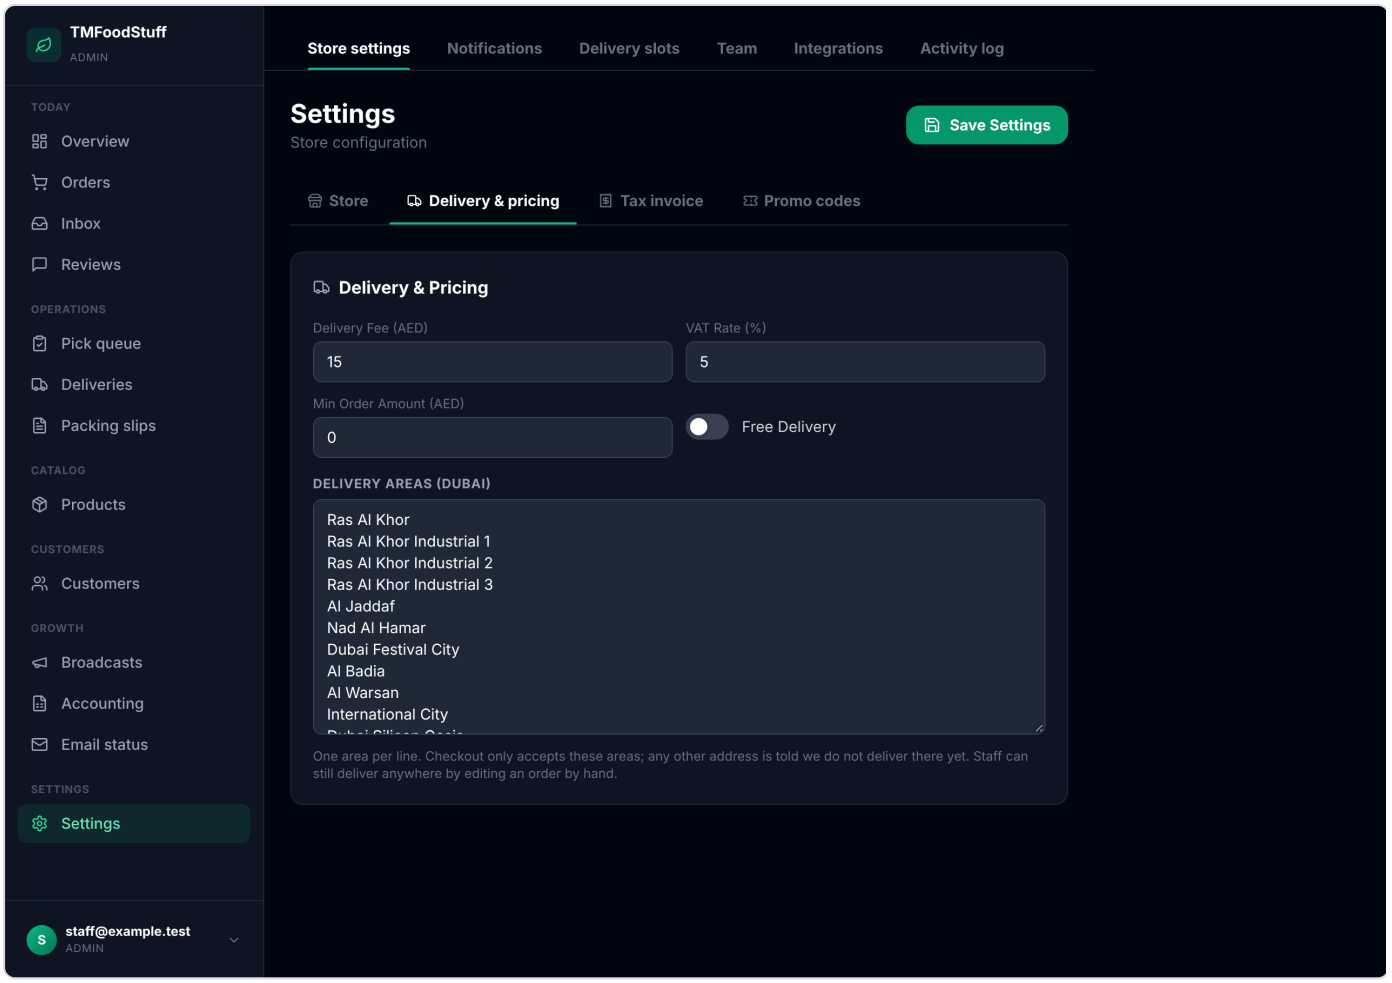

9. Change the delivery areas

Customers can only order to the areas on this list. Any other address is told we do not deliver there yet.

1. Open **Settings** in the left menu, then the **Delivery & pricing** tab.
2. Find the box called **Delivery areas (Dubai)**.
3. Type one area per line. Delete a line to stop delivering there. Add a new line to start.
4. Press **Save Settings** at the top right. Wait for "Saved!".

On the same tab you can change the **Delivery Fee (AED)** and switch **Free Delivery** on or off.

Staff can still deliver outside the list by editing an order by hand.

If something goes wrong

- A red message at the top of the products page says what failed. Read it, press the cross to dismiss it, and try again.
- If a product does not show on the shop, check it is Active and has stock.
- If a change does not appear, reload the page and look again.
- Still stuck? Write down what you pressed and what the message said, and send it to the person who set up the site.
